

The RP2040 GPIO pins can support a max of 50mA TOTAL. RP2040 runs at 3.3V. Each pin should not draw more than 16mA.  $3.3/0.016 = 206$ . Let's go higher and say 220R

This board can be mounted where space allows rather than needing to be near the sensors  
**Design of a sensor board for use with daughter sensor board**
